in Furniture and Homeware Design Category, 2010 - 2011.

The wedding stool. Stool by Aiki Rovithi

The wedding stool combines the cold and industrial metallic element with the earthy and warm element of wood. The wedding stool is lightweight and easy to carry around - the metallic part can be used as a handle and it is exchangeable as it clasps and unclasps on the wooden part very easily. It also enables the user to customize his own stool by choosing his favorite colors. From our point of view the wedding stool unites wood and metal in holy matrimony, before the eyes of design! At least their marriage will last!
