## The "1000cc" ceramic carafe. Water carafe by Aiki Rovithi

The "1000cc" ceramic water carafe, has one liter capacity and comes with an extractable metallic ice-pack. The metallic ice-pack clasps and unclasps on the carafe with one simple move. So, the carafe can be filled with cold water and in addition, we can freeze the metallic ice-pack and apply it on the carafe before serving. Due to the insulating effect of both the metallic ice-pack and the ceramic material, water is kept cold for much longer in room temperature.

**1000** Ceramic  
Carafe
